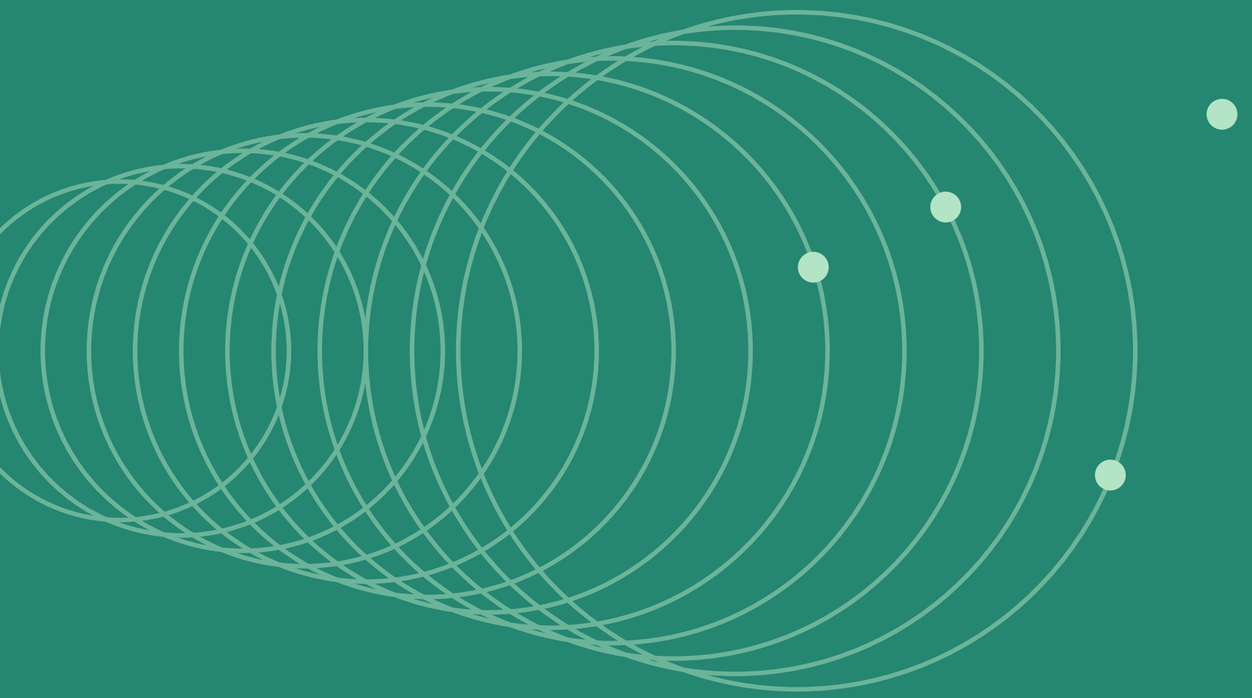
HEALER

An Virtual AI Psycho Therapist

By OpenThunder

HEALER



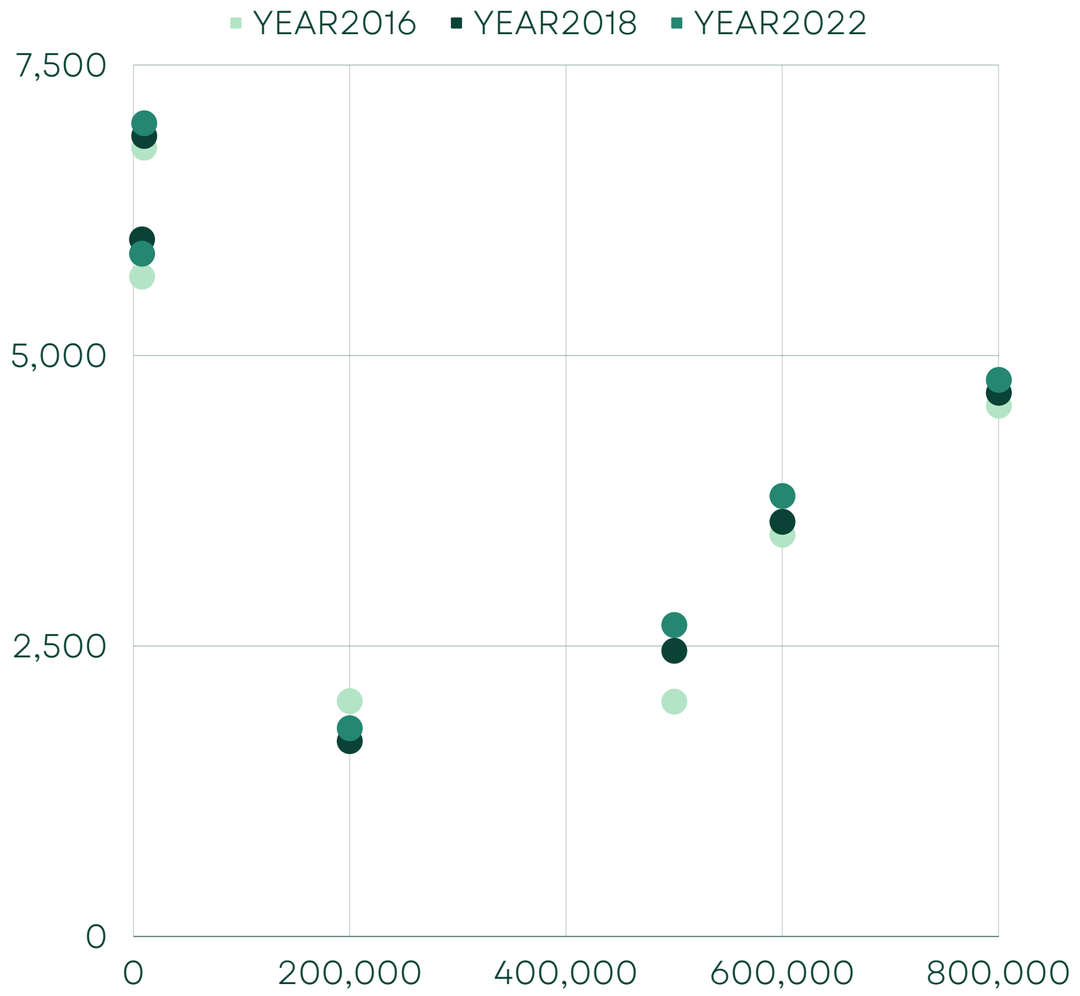
An virtual AI Psychotherapist which Helps and consoles people who were depressed and became mentally unstable.Speaks with them revive them from their Suicidal Thoughts and gives tasks to keep them engaged and Joyful

Back to Agenda

WHY WE DID THIS?

Nearly 800,000 people die every year due to metal unstability by suicide.

Since there's a lack of kindness and a person to console them and also to show the correct path to them



Back to Agenda

WORKING

Healer,an virtual AI psychotherapist based of the integration of whisper and chatgpt which sets as an next gen medical communication to patients,to resolve their mental unstablity.

Back to Agenda

FEATURES

Great Business Model

Bends with the Ever growing Burgeoning Economy and Technology

Easy to use and User& beginner-friendly UI design

Web Integration makes it even more accessible for the people.

Citizen centricity

Effective service-delivery improvements towards the product

Problem We Solved

01

Reduces the Rate of Suicides

Created an AI to console and revive them for a healthier life to lead.

02

Psychotherapy for anyone at any time

Literally, anyone can take up the Therapy session to revive their mind state from depression.

03

Reduced Cost of Hospitality

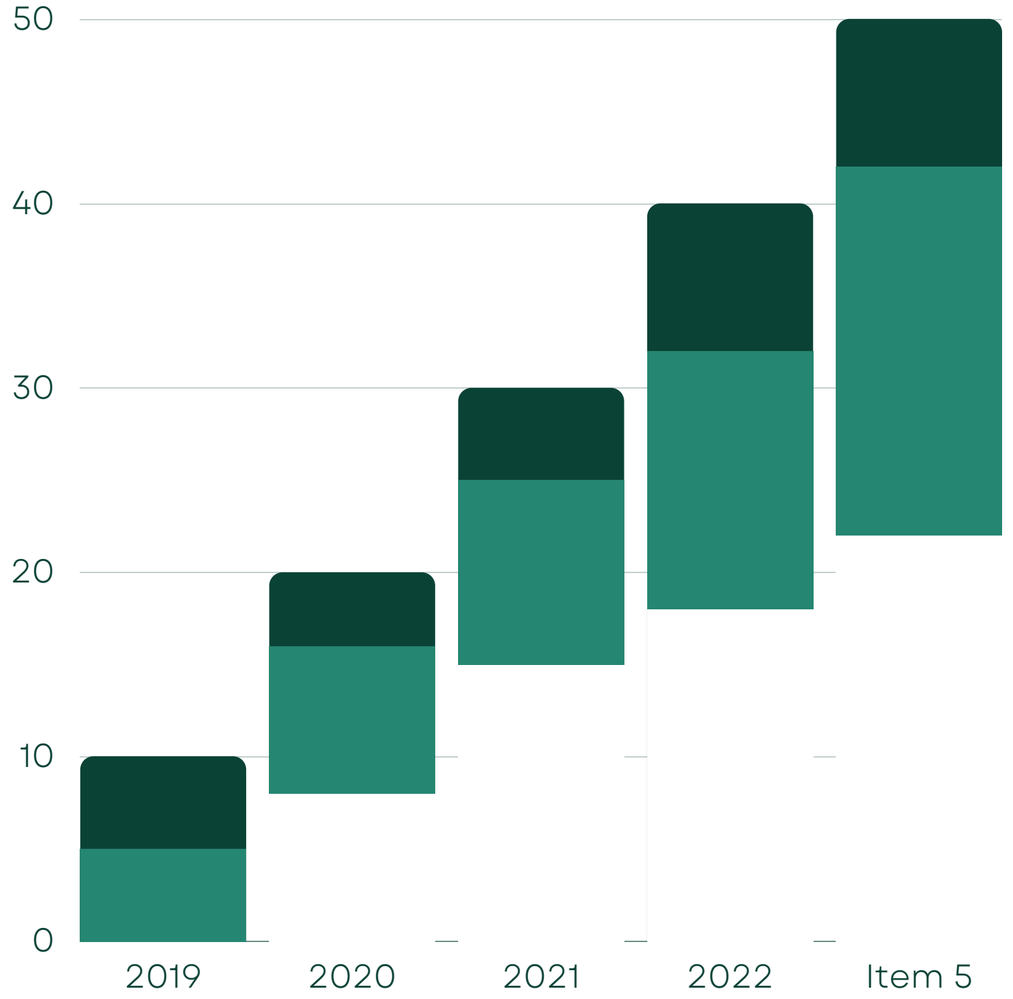
The accessible session are free of cost for all public and subscription for hospitals at low cost which replace the traditional psychotherapists .

Business Model

1)It can Replace psychotherapists at hospitals.So a subscription-based model for hospitals can give us a lot scope of market

2)In the 40 Billion Dollar Healthcare industry, Data are very crucial and needed for research, so we can too provide analysis for them on patients' mental conditions with anonymous and secure data for improving the quality of Healthcare

MEDICAL DATA industry REVENUE (BILLIONS)



Back to Agenda

FUTURE OUTLOOK

- A 3d Human model,CGI generated can be integrated with Healer ,to perform these tasks even at Online Meetings too.
- Can Be implemented At AR/VR
- Better Fine-Tuning of Model using new DataSets and better Web Interfacing for the model.
